# DISCOVERY/PROBLEM STATEMENT

---

We take cab rides on a regular basis (sometimes even daily!), and yet when we're hitting that 'Book now' button, we rely on manual on-the-fly calculations rather than hardcore ML ones. And that's what I aim to demonstrate here.

# TECHNOLOGIES AND LANGUAGES

---

# CONCLUSION

---

Random forests significantly improved the predictive ability of our Machine Learning model. Another way to improve the model's accuracy is to increase the amount of training data , or building ensemble models. If we have a lot of dimensions (features) in the data, dimensionality reduction techniques can also help improve the model's accuracy.
